

TO WHOM IT MAY CONCERN

I hereby confirm that the products manufactured by Timberwise Oy and having antibacterial additive mixed into surface treatment materials (UV cured lacquers and wax oil) in our normal production process are proven to be safe, applicable with surface treatment materials and function per intended use.

Visually and functionally our products are not impacted by the antibacterial additive. Our production controls secure that the amount of the additive added in the surface treatment process is correct and identified by the additive manufacturer to be safe. It has also been proven by the surface treatment manufacturer that UV cure and hence the other surface treatment features are not impacted when antibacterial additive is mixed into the surface treatment material.

Loimaa, 21. 9. 2021
